

Lameness is the most significant welfare problem on UK dairy farms. It is also the second most costly disease of dairy cows after mastitis. Farm workers need to be able to identify and treat lame cows promptly and effectively. This has been shown to be the single most effective measure on farms to reduce lameness.

Our 2 Day Foot Trimming Course

- Learn the causes of lameness
- Learn the anatomy of the bovine foot, and how to trim using the Dutch 5 Step technique to achieve correct balance
- Learn how to correctively trim lame cows and apply blocks

Grinder Training

Learn how to safely integrate use of an electric grinder into your trimming technique

1 Day Advanced Trimming Course

- Aimed at people who are already regularly trimming cows' feet who want to improve success with difficult cases
